

JX GAS HEATERS

Wall Mounted for small spaces

Efficient to run

Heat on demand

Available for indoor
and outdoor
applications

ENERGY
EFFICIENT

ENVIRONMENTALLY
FRIENDLY

HEALTH &
WELLBEING

AUSTRALIAN MADE
& DESIGNED

SMARTPHONE
& INTERNET
CONNECTIVITY

Wall-mounting saves space and makes maintenance easy. The power flue reduces clearances around the heater. Together they allow the JX to squeeze into very tight spaces.

Normal flues rely on natural draught, but a fan 'powers' the JX draught so it can be more compact, much more efficient, to have higher flow rates and run cooler.

Outdoor models expel flue gases through a stainless steel slot on the front so they operate without difficulty in high winds. Indoor models have one flue inside another. The inner flue carries combustion gases outside, while the outer flue draws in fresh outside air to feed combustion. It's a sealed system so even in an enclosed space there is no need for additional room ventilation to support combustion. And being fan driven, the flue can be terminated horizontally, so no flues or cowls on the roof.

All in all, the JX flue has the power to deliver higher efficiency, greater performance, longer life and, of course, reduced operating costs.

At the heart of the JX heater is the amazing AstralPool Copper-Nickel heat exchanger. The ultra thin fins around each heat exchanger tube absorb all the heat from the burners below and transfer it to the water flowing inside.

Copper-nickel provides the highest corrosion resist-

ance available and the finely honed fins provide 10 times the heat transfer of plain tube.

Developed to ensure short, sharp, even flame distribution these burners offer long-lasting, corrosion-free operation. The burner design helps generate superior performance from a compact package. They also burn more quietly and more efficiently

The JX Series gas pool heaters are so fast they're able to heat most spas in about an hour, and correctly sized, will heat your pool in 24 hours or less. You don't need to run the heater for long periods to warm the pool. It's the nearest thing to 'on-demand' pool and spa heating.

Gas prices vary but the efficiency of the JX does not. Ask for an estimate of local running costs and you'll be amazed at how little year round heating will actually cost..

The JX Series is part of a family of high quality, highly intelligent, interconnected products that work together to take total care of your pool and spa. The Connect 10 controller links all the separate components together through a single control that allows any member of the family to operate the system in house or by a mobile phone or tablet.

A sophisticated electronic thermostat, digital readout, state-of-the-art gas valve and electronic ignition give the JX remarkably accurate and precise temperature control.

The AstralPool Series Gas Pool & Spa Heaters are available in indoor or outdoor versions with 130 and 160 mega joule capacities. They are ideal for spas, swim-spas and most average-sized pools.
